Data Modelling and Form Design

Aim

To design and develop a **Event Registration** using **Zoho Creator** by creating a structured form, applying appropriate validations, and generating a report for managing Event Registeration.

Theory

Data modelling and form design involve organizing data into suitable fields and sections for efficient collection and management. In Zoho Creator, forms can be created using different field types such as Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.

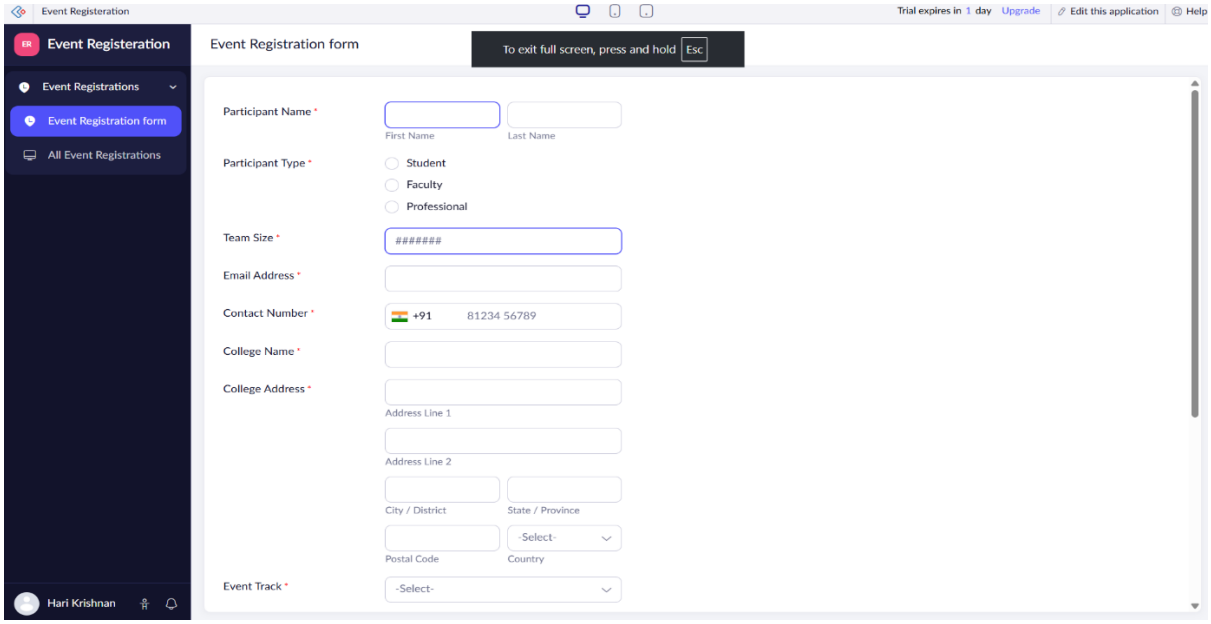

In this experiment, a **Event _Registration _Form** is designed to collect applicant details, contact information, employment and income details, loan requirements, existing liabilities, and credit-check consent. The form is divided into four sections: **Personal Details, Contact Details, college and Event date, and Address and sepcification**.

Validations are applied to ensure accurate data entry, including mandatory fields, valid email and phone formats, positive income values, minimum age of 18 years, and compulsory credit-check consent. The submitted data is displayed in the **Event_ Registration _Report** for review and pre-screening.

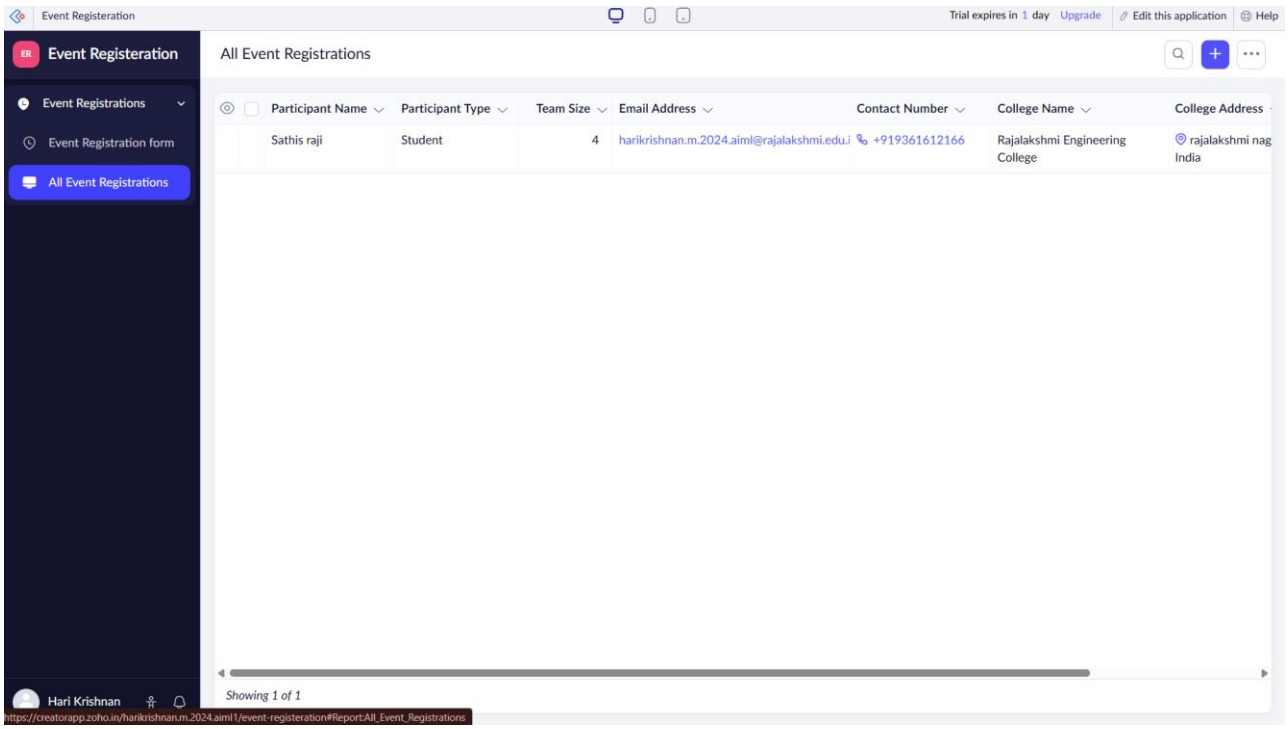

Procedure

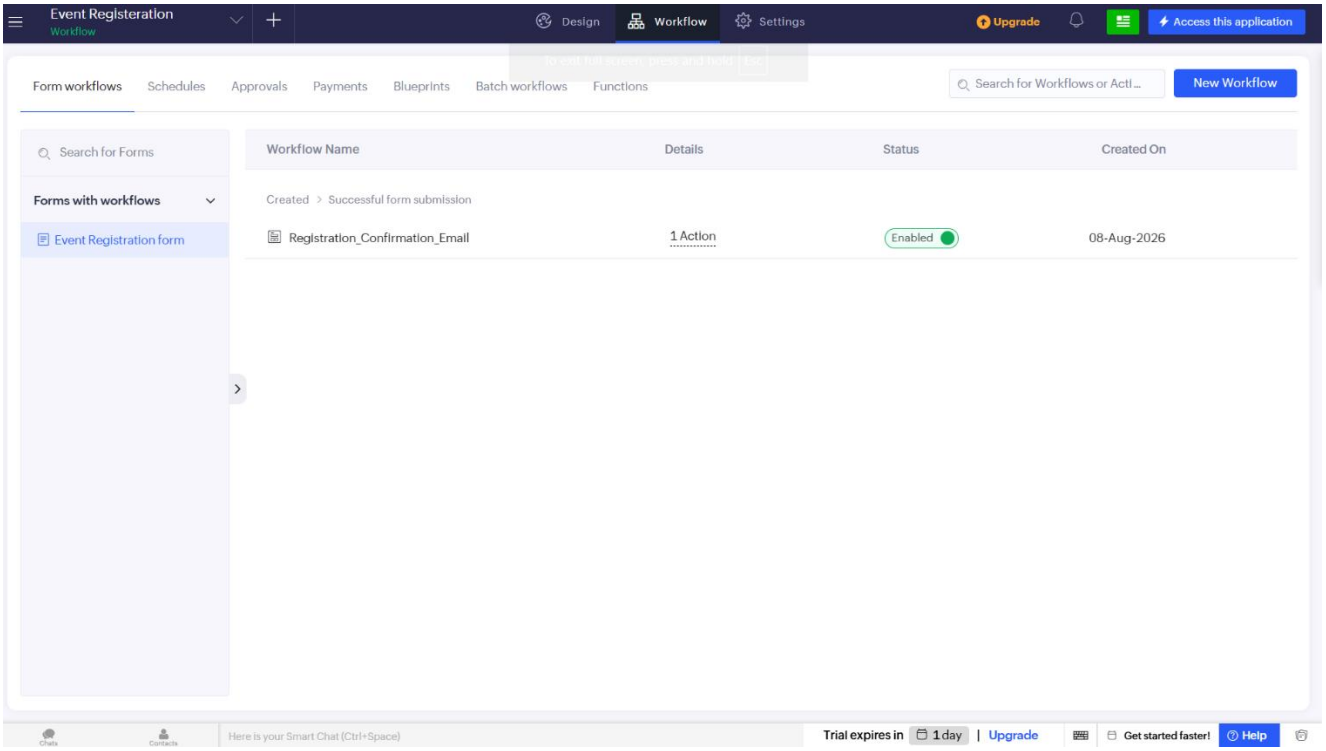

1. Open **Zoho Creator** and create the **Event Registration & Pre-Screening Management** application.
2. Create the **Event Registration _Form**.
3. Add the required fields for applicant, contact, Student,Address, Specification and consent details.
4. Organize the fields into the four specified sections.
5. Configure mandatory fields and apply the required validation rules.
6. Save and preview the form.
7. Enter sample applicant details and submit the form.
8. Create the **Event Registration _Report** and verify the submitted records.

9. Filter the records based on loan type and monthly income for pre-screening.

Sreenshots:

Result

The **Event Registration** was successfully created in **Zoho Creator** with a structured data model, appropriate field validations, and organized sections. The submitted applications were successfully stored and displayed in the **Event Registration** for effective review and pre-screening.
